Article 10 Transparency Statement in respect of

Brown Advisory Global Leaders Fund (the "Fund")

LEI code: 635400WHZWLZELLOYF49

a sub-fund of Brown Advisory Funds plc (the "Company")

Prepared by Brown Advisory (Ireland) Limited (the "Manager")

Brown Advisory LLC (the "Investment Manager")

Brown Advisory Limited (the "Sub-Investment Manager")

30 September 2026

This Article 10 Transparency Statement (the "**Statement**") is published by the Manager of the Company, which has delegated investment management of the Fund to the Investment Manager. The Investment Manager has delegated some of the day-to-day portfolio management of the Fund to Sub-Investment Manager. The Statement meets the requirements of the EU Sustainable Finance Disclosure Regulation ("**SFDR**"), specifically Article 10(1) of Regulation (EU) 2019/2088 and Articles 25 to 36 of the Commission Delegated Regulation (EU) 2022/1288. In accordance with Article 10 of the SFDR, financial market participants such as the Manager are required to publish and maintain summary information on a public website regarding financial products which promote environmental or social characteristics or which have sustainable investment as their objective. The purpose of the statement is to provide transparency on the Fund's environmental or social characteristics, Sustainable Investments and the methodologies that are used to assess, measure and monitor these characteristics within the investment strategy.

Words and expressions defined in the supplement to the prospectus of the Company relating to the Fund shall have the same meaning unless otherwise defined in this Statement.

a) Summary

The Fund is an Article 8 Fund pursuant to the SFDR and promotes environmental or social characteristics but does not have as its objective sustainable investment.

The objective of the Fund is to achieve capital appreciation by investing primarily in global equities.

Under normal circumstances, the Fund aims to achieve its investment objective by investing at least 80% of its net assets in global equity securities. The Fund also will, under normal market conditions: (1) invest at least 40% of its net assets outside the United States (including Emerging Market Countries) which may be reduced to 30% if market conditions are not favourable; and (2) hold securities of issuers located in at least three countries.

Environmental and social characteristics are promoted by investing in fundamentally strong companies that the Sub-Investment Manager assesses, on a qualitative basis, to have strong or improving Sustainability Characteristics while maintaining adequate risk management practices.

The securities in which the Fund may invest will include the equity securities of companies that the Sub-Investment Manager believes are leaders within their industry or country as demonstrated by an ability to deliver high relative return on invested capital over time.

At least 80% of the Net Asset Value of the Fund will be assessed and determined to promote environmental and social characteristics. In addition, a minimum of 50% of the Fund's Net Asset Value will be in companies that have been determined to be Sustainable Investments.

The Sub-Investment Manager's research process includes an assessment of Sustainability Characteristics and material Sustainability Risks for every company in the Fund. This research is fully integrated into the Fund's investment process and is provided through in-house research assessments. These assessments are then conducted on portfolio holdings periodically after investment in order to monitor ongoing compliance

with the Sub-Investment Manager's sustainability criteria. The Sub-Investment Manager monitors the Sustainability Characteristics of the Fund through sustainability indicators.

The Sub-Investment Manager will meet with management teams and engage in a rigorous bottom-up investment selection process.

In assessing the Sustainability Characteristics and Sustainability Risks of the Fund, the Sub-Investment Manager uses data sources which include publicly available data, third party data providers, information gathered from engagement activity if applicable and the Sub-Investment Manager's research team's analysis. The Sub-Investment Manager conducts ongoing discussions with companies to inform its investment research and decision-making.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

b) No Sustainable Investment Objective

The Fund promotes environmental or social characteristics but does not have as its objective sustainable investment.

c) Environmental or Social Characteristics of the Fund

The Fund will invest in fundamentally strong companies that the Sub-Investment Manager assesses, on a qualitative basis, to have strong or improving Sustainability Characteristics while maintaining adequate risk management practices.

In doing so, the Fund promotes the following environmental or social characteristics:

- **Emissions Reduction**: companies with internal strategies to reduce emissions;
- **Resource Efficiency**: companies implementing efficient operations that reduce resource use; and/or
- **Positive Outcomes for the Environment and Society**: companies with products or services that: (i) help customers to be more resource efficient; and/or (ii) help to solve sustainability challenges.

The Sub-Investment Manager believes that companies demonstrating these Sustainability Characteristics may be better positioned to manage material business risks and support the companies' long-term business resilience. The Sub-Investment Manager assesses these factors through its qualitative investment research and ongoing monitoring when evaluating whether a company demonstrates strong or improving Sustainability Characteristics. This assessment forms part of the Fund's investment due diligence.

The Fund does not have Sustainable Investment as its objective but does commit to investing at least 50% of the Fund's NAV in Sustainable Investments.

d) Investment Strategy

The objective of the Fund is to achieve capital appreciation by investing primarily in global equities.

Under normal circumstances, the Fund aims to achieve its investment objective by investing at least 80% of its net assets in global equity securities. The Fund also will, under normal market conditions: (1) invest at least 40% of its net assets outside the United States (including Emerging Market Countries) which may be reduced to 30% if market conditions are not favourable; and (2) hold securities of issuers located in at least three countries.

The Sub-Investment Manager will use in-house research and other external research sources to identify a universe of companies across a broad range of industries and countries whose underlying fundamentals are considered by the Sub-Investment Manager to be attractive. The Sub-Investment Manager will focus on companies that it believes exhibit the following desirable characteristics:

- high quality companies that are leaders in their industry or country supported by enduring competitive advantages that can deliver high relative return over time;
- capable and trustworthy management who manage for the long term;
- sustainable, predictable, premium growth in cash flow over time;
- positive industry dynamics;
- sensible capital allocation; and
- have a reasonable price – the Sub-Investment Manager expects growth to compound the excess economic return over time.

This includes companies with identifiable sustainable business advantages ("**SBAs**"):

- **Revenue Growth**: *e.g.,* attracting or retaining business through the sustainable attributes of its offerings, or helping customers solve for challenging sustainability issues.

- **Cost Improvements**: *e.g.*, improving margins from efficient operations, risk mitigation or other measures that increase productivity while using less resources.

- **Enhanced Franchise Value**: *e.g.*, improving customer loyalty, attracting and retaining top talent, growing faster or taking market share through sustainable commitments and/or positive societal impact.

The securities in which the Fund may invest will include the equity securities of companies that the Sub-Investment Manager believes are leaders within their industry or country as demonstrated by an ability to deliver high relative return on invested capital over time.

The strategy also will identify Sustainable Investments, investing at least 50% of the Fund in companies that positively contribute to identified sustainability levers, being one or more of:

- **Climate Conditions and Resource Access**:
    - Sustainable Technology Innovation
    - Efficient Production & Conservation
    - Clean Energy
    - Sustainable Agriculture/Management
    - Sustainable Finance
    - Clean Water & Sanitation

- **Culture & Human Capital:**
    - Affordable Housing
    - Economic Mobility & Community Development
    - Education
    - Culture & Safety
    - Health & Wellness

All companies added to the portfolio are analysed according to a variety of applicable governance factors. This analysis forms part of the Fund's general sustainable investment analysis. Applicable governance factors are: ownership and control; board and management composition and structure; employee relations; tax transparency; remuneration practices; shareholder rights; accounting practices; transparency and disclosure; and business ethics.

e) Proportion of Investments

At least 80% of the Net Asset Value of the Fund will be assessed and determined to promote environmental and social characteristics. In addition, a minimum of 50% of the Fund's Net Asset Value will be in companies that have been determined to be Sustainable Investments.

Up to 20% of the Fund's Net Asset Value may consist of other investments that have not been

determined to be aligned with the environmental and/or social characteristics, including any cash that the Fund may not yet have allocated to an investment or for liquidity or currency hedging purposes through the use of FDI.

f) Monitoring of Environmental or Social Characteristics

To assess the attainment of the environmental or social characteristics promoted by the Fund, the Sub-Investment Manager carries out an in-depth sustainable investment research assessment. This assessment and/or quantitative metrics sourced from 3rd party providers, allows the Fund to determine the performance of companies that contribute to each of the following sustainability outcomes:

- **Emissions Reduction**:
  - weighted-average greenhouse gas emissions intensity of the Fund's investee companies in terms of the Greenhouse Gas Protocol's definition of Scope 1 emissions (direct emissions owned or controlled by a company) and Scope 2 emissions (emissions that a company causes indirectly and come from where the energy it purchases and uses is produced); and
  - the percentage of companies in the Fund with an emissions reduction target.

- **Resource Efficiency**:
  - Companies that have implemented or are in the process of implementing efficient operations to reduce resource use (e.g. Energy, water, materials).

- **Positive Environmental or Social Outcomes**:
  - Companies whose products or services that: (i) help customers to be more resource efficient, and/or (ii) help to solve broader sustainability challenges.

The identification of companies contributing to these outcomes is based on a combination of:

- Corporate disclosures, including sustainability reports and regulatory filings;
- Direct company engagements with management to understand sustainability strategies and operational practices;
- Conversations with issue experts to contextualise company actions within broader environmental and social levers; and
- Third-party data from sustainable investing research providers, used to supplement internal analysis.

This multi-source approach enables the Sub-Investment Manager to form a qualitative and evidence-based view of each company's sustainability profile. The resulting percentages are reported annually and reflect the proportion of portfolio companies that meet the relevant criteria for each indicator.

g) Methodologies

The Sub-Investment Manager's bottom-up research process seeks to understand the fundamental characteristics and Sustainability Characteristics of its investments.

The research approach is based on a qualitative assessment of each security across a broad range of factors but will contain certain quantitative elements. The purpose of this assessment is to identify companies that, overall, approach sustainability issues that help to maintain or improve a company's financial position while also seeking to avoid those companies exposed to material Sustainability Risk. The Sub-Investment Manager will avoid those companies that it believes either to be failing to manage Sustainability Risks or to not have in place appropriate mitigants or plans to secure an improved position with respect to Sustainability Risks.

The Sub-Investment Manager believes that investing in the best companies globally in any sector or country can deliver superior long-term investment returns. The Sub-Investment Manager seeks to identify high-quality companies underpinned by structural long-term growth and strong management teams, and to purchase those companies at reasonable prices.

These methodologies allow the Sub-Investment Manager to select companies that may have an SBA and also those which the Sub-Investment Manager considers to be Sustainable Investments.

In addition to the Sub-Investment Manager's proprietary and qualitative analysis, the Sub-Investment Manager relies on a third-party provider to apply a rules-based screening process which seeks to identify companies that may have controversial business involvement, as determined by the Sub-Investment Manager. The Sub-Investment Manager retains discretion to review, challenge, or override the third-party provider's data where it concludes that such data does not accurately reflect a company's business activities, based on the Sub-Investment Manager's own research and assessment. When third-party data is not available, the Sub-Investment Manager will utilise discretion in making investments.

The Fund also considers PAIs at portfolio level.

h) Data Sources and Processing

The Sub-Investment Manager relies on a number of data sources when assessing Sustainability Characteristics and Sustainability Risks. These sources include publicly available data, third party data providers, information gathered from engagement activity if applicable and the Sub-Investment Manager's research team's analysis. Third party data is one input in the Fund's approach but is not the primary factor in the assessment.

Responsibility for data accuracy and any data accessed via a third party platform is undertaken by the respective data provider. Any in-house data that is derived from the Sub-Investment Manager's internal research database is peer-reviewed prior to being distributed internally.

Estimated data varies by the dataset and is dependent on the coverage of the data provider.

i) Limitations to Methodologies and Data

Investing on the basis of sustainability criteria is qualitative and subjective by nature, and there can be no assurance that the data received from the Sub-Investment Manager's vendors, or any judgment exercised by the Sub-Investment Manager, will reflect the beliefs or values of any particular investor. Data and qualitative information are inherently subject to interpretation, restatement, delay and omission outside the Sub-Investment Manager's control.

Due to inconsistencies with respect to the evaluation of particular companies by third party research and data providers, the evaluation of an investment's sustainability characteristics may differ between financial market participants. For this reason, the Sub-Investment Manager always uses a combination of qualitative and quantitative data. Quantitative data is provided by either the company directly or by a third party data provider and this is then overlaid by the qualitative assessment undertaken by the Sub-Investment Manager's research team. Whilst the data providers are responsible for the accuracy of the data, the insights that the Sub-Investment Manager's research teams gain through their interaction with the companies and their own analysis, limits the effect of poor/lack of data in the investment process.

j) Due Diligence

As noted above, the Sub-Investment Manager's sustainable investment research team conduct a significant amount of up-front due diligence prior to investing and monitor the companies in the Fund on an on-going basis. Additional monitoring is also undertaken through a quarterly review of certain Sustainability Characteristics of the Fund. In addition to the in-house qualitative analysis, the Sub-Investment Manager has access to data from third-party providers. The research process may also include but is not limited to a review of public filings, meetings with management teams and site visits to operations, research around industry and competitive dynamics, and checks with competitors or suppliers.

The Sub-Investment Manager's research teams are tasked with overseeing and monitoring the portfolio manager's approach to integrating sustainability considerations and engagement insights into their investment due diligence.

k) Engagement Policies

The Sub-Investment Manager will meet with management teams and engage in a rigorous bottom-up investment selection process. The Sub-Investment Manager emphasizes individual security selection based on identifying long-term attractive businesses *i.e.*, those with significant desirable characteristics (such as a viable, long-term franchise, sustainable business model, generate excess economic return, high return on invested capital and stable profitability) and few or no undesirable characteristics (such as excessive financial or operational leverage, risk of business or product obsolescence, excessive compensation, misaligned incentives or management hubris), when they are available at reasonable prices. When possible and material to an investment decision, these conversations are a component of the Sub-Investment Manager's research process and on-going monitoring.

Where an investee company is deemed to be doing significant harm to the environment or society, and due diligence (including engagement) with the company indicates that the harm is systemic, detractive from the Fund's investment, and the harm is unlikely to be mitigated, the Sub-Investment Manager will exit the position in a manner that the Sub-Investment Manager believes to be in the best interests of the Fund, taking account of such factors such as costs of dealing and ensuring the Fund is fully invested.

l) Designated Reference Benchmark

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.
